

# INDEX

|   |    |    |
|---|----|----|
| Preface .....   | p. | 13 |
| CHAPTER 1   |    |    |
| INTRODUCTION TO INFORMATION THEORY AND DATA MANAGEMENT          |    |    |
| <i>Francesco Bellini and Fabrizio D'Ascenzo</i> .....           | »  | 15 |
| 1.1. Data, information and knowledge .....                      | »  | 15 |
| 1.2. The value of the information .....                         | »  | 16 |
| 1.3. Big data and data economy .....                            | »  | 21 |
| 1.3.1. Characteristics of the Big Data .....                    | »  | 21 |
| 1.3.2. Big Data and Open Data Models .....                      | »  | 24 |
| CHAPTER 2   |    |    |
| A BRIEF (AND INCOMPLETE) HISTORY OF COMPUTING AND DATA SCIENCE  |    |    |
| <i>Francesco Bellini and Fabrizio D'Ascenzo</i> .....           | »  | 27 |
| 2.1. Analogic era .....   | »  | 27 |
| 2.2. Digital era .....  | »  | 30 |
| 2.2.1. Pioneering times .....                                   | »  | 30 |
| 2.2.2. Transistors technologies and programming languages ..... | »  | 34 |
| 2.2.3. Moore's Law and future of computing .....                | »  | 36 |
| 2.2.4. Nano-technologies and quantum computing .....            | »  | 38 |
| CHAPTER 3   |    |    |
| DATA TRANSMISSION NETWORKS                                      |    |    |
| <i>Francesco Bellini and Fabrizio D'Ascenzo</i> .....           | »  | 41 |
| 3.1. Introduction .....   | »  | 41 |
| 3.2. ISO-OSI Model .....  | »  | 42 |
| 3.3. Internet .....   | »  | 45 |
| 3.4. Transmission media .....                                   | »  | 49 |
| 3.5. Commuted telephone system .....                            | »  | 50 |

|   |    |
|---|----|
| 3.6. Communication between computers..... » | 52 |
| 3.7. Broadband..... »                       | 59 |
| 3.7.1. Fixed network access..... »          | 59 |
| 3.7.2. Access through mobile network..... » | 60 |
| 3.8. Ultra Fast Broadband..... »            | 61 |
| 3.8.1. Fixed network access..... »          | 61 |
| 3.8.2. Access through mobile network..... » | 61 |

## CHAPTER 4

### CLOUD COMPUTING

|  |    |
|--|----|
| <i>Francesco Bellini, Diana Martinescu and Luca Satolli..... »</i> | 65 |
| 4.1. Cloud Disclaimers..... »                                      | 65 |
| 4.2. Definitions..... »  | 66 |
| 4.3. Central Ideas..... »  | 67 |
| 4.4. Characteristics..... »  | 68 |
| 4.4.1. Scalability & Elasticity..... »                             | 68 |
| 4.4.2. Availability & Reliability..... »                           | 70 |
| 4.4.3. Manageability & Interoperability..... »                     | 74 |
| 4.4.4. Performance & Optimization..... »                           | 75 |
| 4.4.5. Accessibility & Portability..... »                          | 76 |
| 4.5. Benefit from Cloud..... »                                     | 78 |
| 4.5.1. For Market and Enterprise..... »                            | 78 |
| 4.5.2. For End User and Individual..... »                          | 81 |
| 4.6. Four service models..... »                                    | 83 |
| 4.6.1. Infrastructure as a Service (IaaS)..... »                   | 84 |
| 4.6.2. Container as a Service (CaaS)..... »                        | 86 |
| 4.6.3. Platform as a Service (PaaS)..... »                         | 87 |
| 4.6.4. Software as a Service (SaaS)..... »                         | 90 |
| 4.7. Deployment models..... »                                      | 91 |
| 4.7.1. Public Cloud..... »   | 92 |
| 4.7.2. Private Cloud..... »  | 92 |

|   |     |
|---|-----|
| 4.7.3. Community Cloud..... »   | 93  |
| 4.7.4. Hybrid Cloud ..... »   | 94  |
| CHAPTER 5   |     |
| CYBERSECURITY   |     |
| <i>Francesco Bellini and Fabrizio D'Ascenzo</i> ..... »                   | 95  |
| 5.1. Introduction ..... »   | 95  |
| 5.2. Authentication Systems..... »  | 96  |
| 5.2.1. Type 1 Systems: Password..... »                                    | 99  |
| 5.2.1.1. Paradigm username/password..... »                                | 101 |
| 5.2.1.2. Personal Identification Number (PIN) ..... »                     | 104 |
| 5.2.2. Type 2 Systems: Token ..... »                                      | 105 |
| 5.2.2.1. Paradigma Challenge/Response..... »                              | 105 |
| 5.2.2.2. Timestamp Paradigm ..... »                                       | 106 |
| 5.2.2.3. One Time Password (OTP) ..... »                                  | 107 |
| 5.2.2.4. OTP via Token ..... »  | 110 |
| 5.2.2.5. Smart card and USB Token ..... »                                 | 111 |
| 5.2.2.6. OTP via SMS..... »   | 115 |
| 5.2.2.7. Alternative OTP technologies ..... »                             | 116 |
| 5.2.3. Type 3 Systems: Biometrics..... »                                  | 116 |
| 5.2.3.1. Fingerprints ..... »   | 120 |
| 5.2.3.2. Retina ..... »   | 120 |
| 5.2.3.3. Iris ..... »   | 121 |
| 5.2.3.4. Face..... »  | 121 |
| 5.2.3.5. Signature..... »   | 121 |
| 5.2.3.6. Voice ..... »  | 122 |
| 5.2.3.7. Palm recognition ..... »   | 122 |
| 5.2.4. Other types of authentication ..... »                              | 124 |
| 5.2.4.1. Authentication based on where you are ..... »                    | 124 |
| 5.2.4.2. Authentication based on a combination of several factors ..... » | 125 |
| 5.2.4.3. Password Graphics..... »   | 125 |

## CHAPTER 6

## DIGITAL LEDGER TECHNOLOGIES

|   |   |     |
|---|---|-----|
| <i>Francesco Bellini, Diana Martinescu and Federica Vassalli</i> .....          | » | 127 |
| 6.1. Introduction .....   | » | 127 |
| 6.2. Blockchain, definition and structure .....                                 | » | 128 |
| 6.3. How Blockchain works .....   | » | 130 |
| 6.3.1. Consensus algorithm .....  | » | 132 |
| 6.3.2. Proof-of-work (PoW) .....  | » | 133 |
| 6.3.3. Proof-of-stake (PoS) .....   | » | 134 |
| 6.4. Blockchain's Type .....  | » | 134 |
| 6.4.1. Permissionless .....   | » | 134 |
| 6.4.2. Permissioned .....   | » | 135 |
| 6.5. Smart Contracts .....  | » | 136 |
| 6.6. Public-key cryptography .....  | » | 136 |
| 6.7. Bitcoin as the first decentralized payment system .....                    | » | 138 |
| 6.8. Privacy and Security .....   | » | 140 |
| 6.9. Blockchain applications .....  | » | 141 |
| 6.9.1. Supply Chain Management .....  | » | 141 |
| 6.9.2. Property Rights .....  | » | 142 |
| 6.9.3. Finance .....  | » | 143 |
| 6.9.4. Post-trade e back office cycle .....                                     | » | 144 |
| 6.10. When to use Blockchain .....  | » | 145 |
| 6.11. Blockchain and Internet of Things (IoT) .....                             | » | 148 |
| 6.11.1. Gateway devices as end-points to the blockchain .....                   | » | 150 |
| 6.11.2. Devices that release transactions on blockchain .....                   | » | 150 |
| 6.11.3. Interconnected edge devices as a stopping point of the blockchain ..... | » | 150 |
| 6.11.4. Cloud-blockchain hybrid .....   | » | 151 |

## CHAPTER 7

## IMMERSIVE TECHNOLOGIES

|  |   |     |
|--|---|-----|
| <i>Francesco Bellini and Iana Dulckaia</i> ..... | » | 153 |
|--|---|-----|

|   |   |     |
|---|---|-----|
| 7.1. Immersive technologies: Definition and types ..... | » | 153 |
| 7.1.1. Augmented Reality .....                          | » | 154 |
| 7.1.2. Virtual Reality .....                            | » | 155 |
| 7.1.3. 360-degree videos .....                          | » | 156 |
| 7.1.4. Mixed Reality .....                              | » | 156 |
| 7.1.5. Extended reality .....                           | » | 157 |
| 7.2. Immersive technologies application .....           | » | 157 |
| 7.2.1. Marketing & Advertising .....                    | » | 159 |
| 7.2.1.1. Immersive advertising .....                    | » | 160 |
| 7.2.1.2. Experiential marketing .....                   | » | 160 |
| 7.2.1.3. Immersive web apps .....                       | » | 160 |
| 7.2.1.4. E-commerce and shopping tools .....            | » | 161 |
| 7.2.2. Entertainment .....                              | » | 161 |
| 7.2.3. Manufacturing .....                              | » | 162 |
| 7.2.4. Design .....                                     | » | 162 |
| 7.2.5. Decision-making .....                            | » | 162 |
| 7.2.6. Maintenance .....                                | » | 162 |
| 7.2.7. Inspection .....                                 | » | 163 |
| 7.2.8. Training .....                                   | » | 163 |
| 7.2.9. Broadcasting and media content production .....  | » | 163 |
| 7.2.10. Education and training .....                    | » | 164 |
| 7.2.10.1. Gamified engagement .....                     | » | 164 |
| 7.2.10.2. Immersive learning experience .....           | » | 164 |
| 7.2.11. Data visualization .....                        | » | 164 |
| 7.2.12. Group Collaboration .....                       | » | 164 |
| 7.2.13. Retail .....                                    | » | 165 |
|   |   |     |
| CHAPTER 8   |   |     |
| ARTIFICIAL INTELLIGENCE                                 |   |     |
| <i>Francesco Bellini and Fabrizio D'Ascenzo</i> .....   | » | 167 |
| 8.1. Introduction .....                                 | » | 167 |

|  |     |
|--|-----|
| 8.2. Artificial Intelligence a general picture..... »                                      | 168 |
| 8.2.1. Historical notes..... »   | 169 |
| 8.2.2. The Turing test ..... »   | 172 |
| 8.3. Weak and strong Artificial Intelligence ..... »                                       | 173 |
| 8.4. Expert systems..... »   | 174 |
| 8.5. Machine learning methods..... »   | 175 |
| 8.5.1. Forecast <i>vs.</i> explanation ..... »   | 177 |
| 8.5.2. Complexity and overfitting ..... »  | 178 |
| 8.6. Neural networks and deep learning..... »  | 179 |
| 8.7. Applications of Artificial Intelligence..... »  | 182 |
| 8.8. Robotics ..... »  | 185 |
| 8.9. Robotic Process Automation ..... »  | 188 |
| 8.9.1. What is Robotic Process Automation and how is it used? ..... »                      | 189 |
| 8.9.2. What business processes does it involve?..... »                                     | 190 |
| 8.9.3. Do software robots have the potential to make current workers<br>redundant? ..... » | 192 |
| 8.10. Conclusions ..... »  | 193 |
|  |     |
| CHAPTER 9  |     |
| INTERNET OF THINGS, CYBERPHISICAL SYSTEMS AND SMART PRODUCTION                             |     |
| <i>Francesco Bellini and Roberto Ruggieri</i> ..... »                                      | 197 |
| 9.1. Definitions and objectives ..... »  | 197 |
| 9.2. Areas of use and operation ..... »  | 199 |
| 9.3. IoT: common elements..... »   | 202 |
| 9.4. The Internet of Things: terminology derived from..... »                               | 205 |
| 9.4.1. (IoE) Internet of Everything ..... »  | 206 |
| 9.4.2. Internet of Robotic Things (IoRT) ..... »   | 207 |
| 9.4.3. Consumer Internet of Things (CIoT) ..... »  | 207 |
| 9.4.4. Industrial Internet of Things ..... »   | 208 |
| 9.5. The Industrial Internet of Things and the intelligent manufacturing<br>company..... » | 211 |
| 9.5.1. Intelligent company control..... »  | 212 |

|  |     |
|--|-----|
| 9.5.2. Asset performance management..... »                   | 215 |
| 9.5.3. Advanced operators ..... »                            | 215 |
| 9.6. Different fields of application ..... »                 | 216 |
| 9.6.1. Innovation in safety and process development ..... »  | 216 |
| 9.6.2. Innovation in production process control..... »       | 217 |
| 9.6.3. Data driven stock management ..... »                  | 218 |
| 9.6.4. Remote monitoring..... »                              | 219 |
| 9.6.5. Predictive maintenance ..... »                        | 219 |
| 9.6.6. Innovation in maintenance..... »                      | 220 |
| 9.6.7. Innovation in distribution ..... »                    | 220 |
| 9.6.8. Innovation in sales and after-sales ..... »           | 220 |
| 9.7. Smart Factory and Cyber-Physical Systems..... »         | 221 |
| 9.8. IoT technology: cloud, fog and edge computing ..... »   | 224 |
| 9.9. IoT Platforms ..... »                                   | 225 |
| 9.10. IoT: exponential growth and predictive analysis..... » | 226 |
|  |     |
| CHAPTER 10   |     |
| DIGITAL TRANSFORMATION AND SMART CITY DEVELOPMENT            |     |
| <i>Irina Gorelova and Fabrizio D'Ascenzo</i> ..... »         | 229 |
| 10.1. Smart city – a rising trend ..... »                    | 229 |
| 10.2. Smart city definition ..... »                          | 231 |
| 10.3. Smart city dimensions ..... »                          | 236 |
| 10.4. Smart city and sustainable development ..... »         | 240 |
| 10.5. Digital technologies for smart cities ..... »          | 245 |
| 10.6. Intelligent transportation systems..... »              | 246 |
| 10.7. Smart energy solutions ..... »                         | 247 |
|  |     |
| CHAPTER 11   |     |
| SMART TRANSPORT  |     |
| <i>Francesco Bellini and Madalina Vlasie</i> ..... »         | 251 |
| 11.1. Introduction ..... »                                   | 251 |

|  |   |     |
|--|---|-----|
| 11.2. The Cooperative Intelligent Transport Systems (C-ITS) .....                | » | 255 |
| 11.2.1. The technologies behind the Cooperative Intelligent Transport Systems. » |   | 257 |
| 11.2.2. DSRC Communication Technology..... »                                     |   | 258 |
| 11.2.3. DSRC and 5G integration in the cooperative system .....                  | » | 259 |
| 11.3. The V2X Communication..... »   |   | 265 |
| 11.3.1. V2V Communication .....  | » | 265 |
| 11.3.2. Optical Wireless Communication (OWC) .....                               | » | 266 |
| 11.3.3. V2I Communication..... »   |   | 268 |
| 11.3.4. V2N Communication .....  | » | 271 |
| 11.3.5. V2P Communication..... »   |   | 272 |
| 11.4. Hurdles to overcome for a cooperative system .....                         | » | 274 |
| 11.4.1. Technological hurdles .....  | » | 275 |
| 11.4.2. Financial hurdles .....  | » | 275 |
| 11.4.3. Legal hurdles .....  | » | 275 |
| 11.4.4. Social and organizational hurdles .....                                  | » | 276 |
| BIBLIOGRAPHY .....   | » | 277 |
| SITOGRAPHY .....   | » | 283 |
| AUTHORS .....  | » | 285 |
